1 Notes on the operating instructions

The operating instructions are an integral part of the machine and must be passed on to all subsequent owners or users.

Please read these operating instructions through carefully before use. Please also take note of any additional operating instructions for accessories and integrated third party components.

Only through understanding these operating instructions can errors be avoided and trouble-free operation of the installation guaranteed. By paying attention to the operating instructions, hazards can be avoided, repair and breakdown costs reduced and the reliability and durability of the installation can be increased.

Retain these operating instructions for the entire lifetime of the installation. The storage location must be protected against moisture. Please store the operating instructions in a readily accessible location close to the installation.

Ensure that all persons who work with or on the machine have read and understood the operating instructions.

The operating instructions must be available in the local language for each EU country. If this is not the case, the washing machine must not be commissioned.

The original operating instructions in German and all operating instructions in all languages for EU countries can be downloaded from the following address: https://partner.net.meiko.de

The entire technical documentation are available free of charge. Additional copies are available for a nominal fee.

All rights, including photo-mechanical reproduction and storage on electronic media, are reserved to MEIKO Maschinenbau GmbH & Co. KG. Any commercial use or distribution of the texts, illustrated models, drawings and photographs within this product is not permitted.

It is not permitted to reproduce, store or pass on the operating instructions, either in whole or in part, or transfer or translate it, in any form or with any medium, without prior written approval.

MEIKO wishes you much pleasure and success.

© 2020 MEIKO Maschinenbau GmbH & Co. KG

Notes on use of the operating instructions:

• A bullet point (*) designates an action step.

• Numerals (1.) designate several action steps that must be executed in the specified sequence.

• Position numbers in the text that refer to position numbers in figures are shown in parentheses:
  (1) Position number 1 in the illustration

• The text is always below the figure and refers to it until a new image follows.
1.1 **Product identification**

These operating instructions apply to the following machine type:
Multiwasher **TopClean 60, Type M2**.

1.2 **Delivery contents**

The delivery contents include:
- 1x Multiwasher TopClean 60
- Connecting hoses for fresh water and waste water
- Documentation

Optional availability:
- Racks, according to rack range

1.3 **Related documents**

The following documents provide additional information to these operating instructions:
- Installation drawing
- Wiring diagram
- Installation instructions for optional components
All of MEIKO’s obligations arise from the relevant purchase contract, which also contains the entire and only valid guarantee provisions. These contractual guarantee provisions shall be neither extended nor restricted as a result of any explanations given in the instructions.

Further, we draw your attention to the fact that the content of these instructions do not form part of a former or existing agreement, promise or legal relationship and does not modify such a point.

If you follow the instructions in this operating manual carefully, your machine will always give you total satisfaction and will have a long service life.

The delivered system corresponds to the state of technology and safety regulations valid at the time of production/delivery.

The information, data and notes specified in the operating instructions correspond to the latest version at the time of printing. No claims for already delivered systems may be asserted based on these statements, illustrations and descriptions.

Claims must be reported to the manufacturer immediately after determination of the defect or error. Liability claims for personal injury or material damage as well as for operational problems are excluded if they are due to one or more of the following causes:

- Unintended use.
- Improper installation, commissioning, operation and maintenance.
- Operation of the machine or system with defective safety devices or improperly attached or non-functioning safety and protective devices.
- Noncompliance with the notes in the operating instructions regarding transport, storage, mounting, commissioning, operation and maintenance.
- Unauthorised design changes or settings on the machine or system beyond the intended purpose.
- Improper monitoring of parts subject to wear.
- Use of wear and replacement parts that are not from the manufacturer.
- Improperly performed repairs, inspections or maintenance.
- Catastrophes due to human-induced events or force majeure.
3 Safety

3.1 Symbol explanation

3.1.1 Notes in the instructions

In these operating instructions, important notes for safety are specially marked with symbols. Please always observe these notes to avoid accidents and damages to the system.

Warnings

⚠️ Danger

Short description of the danger:
The signal word DANGER designates an immediately threatening danger. Failure to observe this leads to very serious injuries or death.

⚠️ Warning

Short description of the danger:
The signal word WARNING designates a possible danger. Failure to observe this can lead to very serious injuries or death.

⚠️ Beware

Short description of the danger:
The signal word BEWARE designates a possible danger. Failure to observe this can lead to minor to medium injuries.

Application information

⚠️ Caution

Short description:
The signal word Caution designates a possible danger. Failure to observe this can lead to damage to the machine or system.

Note

The signal word Note designates further information on the machine / system or its application.
### 3.1.2 Safety symbols in the instructions

The following note and danger symbols are used both in the document and on the machine. Observe these symbols and signs on the machine to avoid personal injury and material damage!

The symbols have the following meanings:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="symbol" alt="Warning of hazardous areas" /></td>
<td>Warning of hazardous areas</td>
</tr>
<tr>
<td><img src="symbol" alt="Warning of dangerous electric voltage" /></td>
<td>Warning of dangerous electric voltage</td>
</tr>
</tbody>
</table>
| ![Warning of the danger of hand injuries](symbol) | Warning of the danger of hand injuries  
Caution, keep hands away from parts that bear this warning symbol. The danger exists that hands can be crushed, pulled in or otherwise injured. |
| ![Warning of hot surfaces and liquids](symbol) | Warning of hot surfaces and liquids |
| ![Warning of the machine falling over](symbol) | Warning of the machine falling over |
| ![Warning of environmental damage](symbol) | Warning of environmental damage |
| ![Do not spray with water](symbol) | Do not spray with water |
| ![No drinking water](symbol) | No drinking water |
| ![Access prohibited for persons with pacemakers](symbol) | Access prohibited for persons with pacemakers |
| ![Eye protection must be used or protective glasses must be worn](symbol) | Eye protection must be used or protective glasses must be worn |
| ![Hand protection must be worn](symbol) | Hand protection must be worn |
| ![Read the operating instructions](symbol) | Read the operating instructions |
| ![Disconnect before servicing or repair](symbol) | Disconnect before servicing or repair |
| ![Potential equalisation connection](symbol) | Potential equalisation connection |
3.2 Requirements for the personnel

Commissioning, instructions, repairs, maintenance, assembly and installation of or on MEIKO machines must only be carried out/authorised by MEIKO-authorised service partners.

During operation it must be ensured that:

- Only adequately trained and instructed personnel are allowed to work on the machine.
- Personnel responsibilities for operation, maintenance and repairs must be clearly defined.
- Any personnel undergoing training are only allowed to work on the machine under the supervision of an experienced person.

The required qualifications for performing specific work at the machine are determined by MEIKO.

* with training as an electrician

Note
The instructions must be acknowledged in writing.

Qualified staff, as defined by the operating Instructions, are persons:

- over 14 years of age,
- due to their training, experience and instruction are able to perform the required activities,
- are authorised to perform the required activities by the person responsible for safety of the machine,
- who have been trained in first aid and in the on-site rescue arrangements,
- have read and understood the operating instructions and corresponding safety instructions and will follow them.
### 3.3 Residual risks

3.4 **Intended use**

The Multiwasher TopClean 60 is a cleaning and may only be used as intended and in accordance with these operating instructions.

The TopClean 60 Multiwasher is used to clean e.g. Surgical shoes, flower vases, trays. Other special cleaning goods may be described in the order confirmation.

The cleaning material must be suitable for the cleaning disinfection process, chemothermal and thermal. In case of doubt, the suitability (size, design, general suitability, etc.) can be agreed with MEIKO (info@meiko.de).

3.5 **Foreseeable misuse**

Any use which is not detailed in the section on "Intended use" is contrary to the intended use!

The Multiwasher must **not** be used for these foreseeable misuses:

- Kitchen utensils with electronic components
- Textiles, oven cloths or steel sponges
- Utensils that must not come into contact with foodstuffs (e.g. ashtrays, candlesticks, etc)
- Living creatures
- Food for subsequent consumption
- The preparation of foodstuffs
- Iron utensils
- Support grids of cooking hobs / gas hobs
- Not for the cleaning disinfection process chemo-thermal up to max. 60°C, suitable washware
- Introducing service water into the local waste water system
- Standing or sitting on the open machine door
- Processing of hazardous substances (hazardous, in particular toxic, highly flammable, highly flammable and explosive substances) in the machine
- Operation of the machine in potentially explosive atmospheres
3.6 Fundamental safety and accident prevention regulations

Note
The following safety instructions aim to protect operating personnel as well as third parties and the Multiwasher itself. Please take note of the information in these instructions and the signs on the Multiwasher. However, safety can only be guaranteed during operation if all necessary measures are taken. The operator of the machine has an obligation of care to ensure that these measures are planned for and also to check that they are correctly implemented.

The operator must ensure in particular that:

- The Multiwasher is only used in accordance with its intended purpose. In the event of the machine being used or operated contrary to this, damage or risks may arise.
- In order to guarantee functionality and safety, only original spare parts supplied by the manufacturer may be used.
- The safety of the Multiwasher is not impaired by the subsequent installation of a dosage system.
- Only appropriately qualified and authorised personnel operate, maintain and repair the Multiwasher.
- No one sits or stands on the open door.
- Staff are regularly trained in all questions relating to occupational safety and environmental protection and are familiar with the operating instructions and, in particular, the safety information contained therein.
- The area around the machine is assessed with reference to the risk to other people, e.g. children; people with physical, sensory or mental impairments; people lacking in knowledge or experience. In case of doubt, special optional initiation functions other than conscious, intentional operation (i.e. operation from the screen) are to be deactivated.
- The Multiwasher is only operated in perfect, functional condition, all protection devices and cover panels are installed.
- The safety and switching equipment are regularly tested to ensure they are functioning correctly.
- Multiwasher which are accessible from the rear may only be operated with rear panel cladding.
- The required personal protective equipment is made available to and worn by maintenance and repair personnel.
- A functional test on all machine safety systems is carried out at every regular maintenance appointment.
- None of the safety and warning notices affixed to the Multiwasher itself are removed and all are legible.
- Upkeep (maintenance and inspection) is carried out on optional vendor parts according to the requirements in the corresponding instructions.
- Following installation, commissioning and handing over of the Multiwasher to the customer/operator, no modifications are made (e.g. electrical or mechanical machine components).
- Equipment for optimising energy consumption must not be used to lower the required operating temperatures, as set out in the standards DIN 10510, 10511 and 10512. If equipment for optimising energy consumption is nevertheless installed, MEIKO does not accept any responsibility for a possible reduction in the quality of the wash and hygiene.
Information on operating the Multiwasher:
- Only operate the Multiwasher under the supervision of trained personnel.
- Do not use the Multiwasher if you are unsure about its operation.
- Always close all doors and flaps.
- After use, turn off the machine at the mains isolator. This is located in the electricity supply for the machine.
- Wear suitable work clothing.
- When working on the Multiwasher, wear appropriate protective gloves.
- Allow machine components and washware to cool down before touching.

Information on use of detergent/disinfectant and rinse aid:
- Only use detergents/disinfectants and rinse aids that are suitable for the chemo-thermal cleaning disinfection process up to max. 60°C.
- Acquire information from the manufacturers of these products. Only use products authorised by the manufacturer of the respiratory protection technology.

Detergent and rinse aid may contain hazardous substances. The rinse water used during operation contains chemicals.
- Never drink the rinse water.
- Contact a doctor immediately if rinse water is swallowed.
- Pay attention to the manufacturers’ hazard warnings on the original containers and safety data sheets.
- When handling chemicals, wear appropriate protective gloves and eyewear.
- Do not confuse detergent and rinse aid.
- Ensure that the suction connections for the Multiwasher are correctly connected to the containers.

Information on the use of descaling agents
Residue from descaling agents can cause damage to the plastic components and sealing materials in the machine.
- Acquire information from the manufacturers of these products.
- Please observe the manufacturer’s hazard warnings.
- Thoroughly remove any residue after use.

Information on cleaning the machine
Foam can cause malfunctions in the Multiwasher and a poor wash.
- Do not use a foaming manual Multiwasher detergent for pre-cleaning or for cleaning the machine.
- Allow machine components and washware to cool down before touching.

Information on cleaning the surrounding area
When cleaning the surrounding area, the machine can be damaged by aggressive external influences (fumes, cleaning substances (detergents)) or the ingress of water.
- Do not use aggressive detergents (e.g. aggressive tile cleaner).
- If installed at ground level, never allow the surrounding area to flood.
Information on electrics and electronics
Depending on requirements, the Multiwasher is to be connected to a three-phase (400 V) earth wire system. There is a risk of fatal injury if exposed, electrically charged components or cables are touched.

• Please take note of the warning information in these instructions and the signs on the Multiwasher.
• For all work on electrical components in the machine, ensure that the electrical connections are physically secure.
• For all work on electrical components in the machine, check the wires and cables for any possible damage and replace, if necessary.

Incorrect cleaning can cause damage to the electronics.
• The Multiwasher, switch cabinets and other electrical components must never be sprayed with a hose or high pressure cleaner.
• Make sure that no water can enter the machine unintentionally.

Information on non-ionising radiation
Non-ionising radiation is not produced intentionally but unfortunately comes about due to electrical operating equipment (e.g. electrical motors, high-voltage cables and magnetic coils). In addition, the machine has no strong permanent magnet.

3.7 What to do in the event of an emergency
In emergency situations, rapidly switching off the machine will help prevent personal injury or material damage.

• Disconnect the Multiwasher from the power supply using the locally available mains switch.
4  Product description

4.1  Functional description

The TopClean 60 is a cleaning with a square rack. The Multiwasher has one wash and one final rinse cycle. A temperature regulator maintains the set wash temperature of 74°C.

A rotary pump circulates the water from the wash tank into the wash nozzles. The water jets hit the wash ware from different directions. This ensures uniform washing results.

The wash cycle is followed by a fresh water final rinse. The items being washed are rinsed with hot fresh water at 83°C via a separate nozzle system. This heats up the wash ware for the following drying process.

At the same time, the final rinse water is used to regenerate the rinse water; this reduces the degree of soiling of the rinse water.

4.2  Type label

The rating plate is located on the inside of the front panel. Additional rating plates are located on the switch cabinet behind the front panel, and on the separate GiO MODULE (if it is part of the Multiwasher).

The following information can be found on the rating plate:

1. Name and address of manufacturer
2. Machine type
3. Model name
4. Serial number
5. Current type
6. Electrical connection
7. Rated power boiler
8. Water pressure
9. Boiler capacity
10. Steam connection
11. Year of manufacture
12. CE mark
13. IP protection rating
4.3 **GIO-MODULE**

The module works according to the principle of reverse osmosis. Raw water is pressed by a pump through a semi-permeable membrane. The membrane lets only water molecules through. The hardness components and salts (lime scale, etc.) contained in the water are held back. The clean water (permeat) is brought to the Multiwasher; the materials held back (concentrate) are brought to the drain.

4.4 **Blue operating concept**

The parts of the Multiwasher that must be touched by the operator in operation and in daily use are blue. And so after a short briefing, operators know intuitively that they have to remove and clean the wash system, tank cover sieve and filter, for example.

4.5 **Dosing equipment**

**Caution**

*Reduced durability of dosing units and other cleaning and disinfection components*

The use of inappropriate detergent and rinse aid can corrode the dosing units and other machine components.

• If necessary: Consult with MEIKO and the detergent supplier.

**Note**

Information on cleaning chemicals, see chapter "Choosing the right cleaning agent and rinse aid" on page 30.

**Detergent dosing**

The detergent dosing unit is designed for the automatic addition of liquid alkaline detergent to the clean water (manual addition of detergent products is not recommended).

The detergent is transported from the storage container to the wash tank via a conveyor pipeline. The dosing equipment is self-priming. Dosing occurs during each filling cycle and at the beginning of each programme cycle via timer control.

Normally, a dosing of approx. 2 ml of detergent per liter of tank water is the correct concentration. This can be increased/reduced acc. to the water quality, items to be cleaned and degree of soiling to 5 ml/l or to 1 ml/l.
Rinse aid dosing
The rinse aid dosing unit is designed to automatically dose the rinse water with liquid acid rinse aid.

The rinse aid is pumped out of the storage container into the rinse water boiler supply line through a conveyor pipeline. The dosing equipment is self-priming. Dosing takes place for each full cycle and each programme cycle. The correct dosage leads to an even water film.

In case of overdosing, bubbles and stripes will form, which means that the dosage needs to be reduced.

In case of under-dosing, water drops remain on the washware which means that the dosage needs to be increased.

Dosing equipment lifetime
The components of the dosing system are subject to high demands:
- Exposure to high concentrations of cleaning products
- Mechanical strain from peristalsis (e.g. by the peristaltic tube)
- High (ambient) temperatures
- Long operating hours

It is therefore essential that the operator has these parts (i.e. wear and tear parts) checked and serviced regularly. However, it is extremely difficult to prescribe exact life spans when the parts will need to be replaced since conditions differ greatly from machine to machine.

The materials found in the dosing system and especially in the peristaltic tubes are not suitable for use with all detergents and rinse aids available on the market. In certain cases, they must be adapted to the relevant conditions. This will require agreement from the Service Technician (MEIKO authorised) or the detergent supplier.

This maintenance guideline (see page 49) is therefore simply a non-binding recommendation.

4.6 Disinfection control
MEIKO offers two types of machine with thermal disinfection for institutions with additional hygiene requirements. Both versions have greater heating performance in the wash tank than standard machines.

A₀ control
The term A₀ refers to a way of measuring how microorganisms are eliminated by moist heat disinfection methods. By using a moist heat disinfection method, it is expected that a specific temperature over a period of time has the effect of eliminating a predictable number of microorganisms with a particular resistance.

The standard setting for a dishwasher with A₀ – control is the hygiene value A₀ 60:
- The tank temperature during washing is up to 74°C.
- For tank temperatures of 65°C or higher, each tank temperature is assigned a factor.
- Using the measured tank temperature, a value is determined and added every second until the hygiene value A₀ 60 is reached.
- The rinsing process runs until the end of the programme cycle time, but at least until the temperature value is reached. After this comes a pause for draining and the final rinse.
The display shows the current $A_0$ value.

**Thermal disinfection - control**

Thermal disinfection works according to the same principle as Thermolabel control, but other requirements apply:

- The disinfection temperature is $\geq 80^\circ C$, which must be maintained on the washware for $\geq 30$ s.
- During washing, the tank temperature is heated up to $76^\circ C$, and the final rinse temperature is $88^\circ C$.
- The rinsing process runs until the end of the programme cycle time, but at least until the temperature value and specified stop time are reached. After this comes a pause for draining, final rinse and a subsequent application time.

Thermolabel and thermal disinfection control offer a disinfection effect that exceeds the standard, such as for hospitals, care homes, requirements according to the ÖGSV Guideline.
5 Technical data

MEIKO has created a dimensional drawing that shows machine dimensions as well as connection and consumption values. Further data should be taken from the MEIKO dimensional drawing.

<table>
<thead>

</table>

Noise emission
Workplace noise level $L_{pA} \leq 70$ dB (A).

5.1 EC-/EU-Declaration of Conformity
See separate EC-/EU-Declaration of Conformity

6 Assembly

⚠️ Warning

Danger of injury due to entry into a danger zone
Unauthorised persons might be in or enter the danger zone during transport, assembly, commissioning, maintenance and repair work. This can lead to injuries.

- Only qualified persons should perform work at and with the machine.
- Remove unauthorised persons from the danger zone.
- Block off danger area and mark it for third parties.
- Never remove or disable safety devices on the machine.

6.1 Prerequisites for assembly

6.1.1 Checking the condition at delivery

- Check that the delivery is complete immediately after receiving it by comparing it with MEIKO’s order confirmation and/or the delivery note.
- If applicable, submit a claim for any missing parts immediately to the freight forwarder and notify MEIKO.
- Check the machine for transportation damage.

Note
If there is any suspicion of transportation damage, the shipping company and MEIKO must be informed immediately in writing. Photograph any damaged parts and send the pictures to MEIKO.
6.1.2 Requirements for the installation area

The Multiwasher is only frost-proof in as-delivered state or if equipped with special features (optional: frost removal).

Installation of the Multiwasher in an area where the ambient temperature is below 0°C can result in damage to the internal water circuit components (e.g. pump, solenoid valve, boiler, etc.).

- Ensure that the storage and installation locations are always frost free.

There is a danger of slipping in the working area due to the use of water.

- After assembly, put in place non-slip floor coverings in the working area based on the general/location-specific safety regulations.

6.1.3 Requirements for the waste water connection

A waste water pump is integrated into the drain pump.

- Connect the drainage hose to the locally available waste water pipe.
  - For Australia only:
    The drain hose needs to have a water tight connection to a waste fitting complying to AS 1589 AS 2887, a sanitary plumbing pipe or fitting complying with AS/NZS 1260.
  - Depending on the machine application, a grease trap may be included, based on the general/location-specific regulations.
  - For Multiwasher with GiO MODULE, the maximum drain height must be considered (see dimensional drawing).

6.1.4 Requirements for the fresh water connection

Fresh water connections and their components must be carried out in accordance with local regulations, e.g. EN 1717/DIN 1988-100. The fresh water must be of the same quality as drinking water in microbiological terms. This also applies to processed water.

The basic model of the Multiwasher features an air gap (type AA or AB as per EN 1717 or EN 61770). In the case of SVGW (Switzerland) and other countries, a type EA safety device is also required in front of the connecting hose, depending on the machine version. Installation components and materials must be suitable and permitted in accordance with the locally valid regulations. A solenoid valve is integrated into the Multiwasher's fresh water line. This, together with the leakage detector in the floor tray in the frame, ensures that the fresh water inlet within the machine is shut off in the event of a leak.

Pressure range of the fresh water supply flow pressure in front of the solenoid valve:

- Machines with no GiO MODULE:
  0.6–5 bar (60–500 kPa)
- Machines with GiO MODULE or ActiveClean water softener:
  1–5 bar (100–500 kPa)

Measures to ensure correct water pressure:

- If the minimum flow pressure is too low, increase the pressure using a pressure booster pump.
- If the maximum pressure is exceeded, limit the pressure using a pressure regulator.

Other measures:
• Ensure that no rogue iron particles can enter the appliance via the mains fresh water connection. The same also applies for contamination by other metal particles (e.g. copper shavings). Corresponding instructions are contained in the installation drawing.
• A dirt trap must be fitted in the fresh water supply to protect the solenoid valve.
• After the Multiwasher has been unused for an extended period of time, drain the connection line and rinse it before putting the machine back into operation.
• When replacing an old machine with a new one, make sure that the existing feed hose is exchanged for the new feed hose supplied with the machine.

6.1.5 Requirements to the electrical connection

⚠️ Warning

Danger to life from electric shock
Contact with live electrical parts can lead to serious injury or death.
• Work at or repairs to the electrical system must be conducted by a qualified electrician who complies with the electrotechnical rules.
• Disconnect the machine from the power supply before working on the electrical system. To do this, turn the local mains switch to OFF and ensure that it can't be switched back on again.

Note
The wiring diagram is located behind the front panel of the Multiwasher. This must remain in the machine!
The type plate with the electrical connected values is located inside the front panel.

Other dangers

Danger of death by electric shock: contact with live electrical parts can lead to serious injury or death.

Who may connect it?
The Multiwasher must be connected by a (MEIKO authorised) electrician in accordance with the locally applicable norms and regulations.

Local earth wire system
The electrical safety of this machine is only ensured if it is connected to a properly installed protective conductor system. It is very important to verify this fundamental safety feature. If in doubt, have the building wiring checked by an electrician.

Voltage and frequency
The machine may only be operated with the data provided on the descriptive plaque (see chapter “Type label” on page 16).

Power cable/fixed connection:

Recommended connection with protective equipotential bonding
The machine and accessory appliances are intended for permanent connection to the locally available power supply and the locally available protective equipotential bonding and have been tested accordingly before being brought to market.
A 5-pole terminal strip (L1, L2, L3, N, PE) must be used for connection to a three-phase current.
Electricity supply without a neutral wire (N): When connecting to three-phase current, use a 4-pole clamping strip (L1, L2, L3, PE).
Wire colours: live wire L1 = black/1, L2 = brown/2, L3 = grey/3, neutral wire N = blue/4, protective earth conductor PE = green-yellow

**Alternative connection without protective equipotential bonding**

The operator can decide at his/her own discretion and under his/her own responsibility to connect the electrical supply using customer resources in collaboration with a professional electrician:

1. Fixed connection without protective equipotential bonding
2. Plug connection according to EN 60309 (CEE plug connection)

**Note**

Where discharge currents exceed 10 mA, the use of an RCD/FI is not recommended. False alarms restrict machine availability.

MEIKO expressly excludes any liability for damages caused by improper connection of the machine. This includes any work in connection with services due to said connection, e.g. processing complaints or claims due to:
- Triggered RCD/FI
- Automatic shut-down of the supply when consistency is lost in the protective earth conductor (EN 60204-1 Chap. 8.2.8.c)

**Local mains isolator**

The power supply must be fused in accordance with the regulations and a lockable mains isolator provided in the local electrical installation.

If an unearthed neutral conductor (N) is used with three-phase current, the mains isolator must have 4 poles (with alternating current 2 poles).

If the neutral wire (N) is not earthed, you must use a 4-pole mains switch. Mains power cables must be oil-resistant, shielded, flexible cables no lighter than an H07RN-F cable.

**Local fuse protection**

The machine must be fused appropriately for the rated current shown on the descriptive plaque. The electrical connection must be fused as a separately fused circuit (final circuit). Take note of the connection variant.

The requirements for limiting voltage changes, fluctuations and flicker in accordance with DIN EN 61000-3-11 for the Multiwasher TopClean 60 M2 are fulfilled if the network has a current-carrying capacity of ≥ 100 A.

**Protective equipotential bonding**

The screw for the potential equalisation is located on the back of the machine near the media connections.
The potential equalisation connection must be carried out in accordance with the requirements of the local electricity supply companies and all applicable local regulations (in Germany VDE 0100 Part 540). Incorporate the machine and any conductive substructures and table systems into the local potential equalisation system.
6.2 Transport

⚠️ Warning

Danger of injury from the machine falling over
The machine can fall over if transported incorrectly. People can be injured as a result.

- Transport work must be performed only by qualified persons.
- Please note safety instructions on the packaging.
- Always transport the machine only on the supplied wooden frame.
- Wear protective gloves and shoes.

The packaging is specifically designed to allow the appliances to be moved safely and securely using a pallet jack or a sack truck. For safe transport, the Multiwasher is supported by a special square-timber frame.

- Execute transport carefully.
- Open packaging using a suitable tool.
- Unpack the Multiwasher only after transport is completed.
### 6.3 Perform assembly

#### Warning

**Danger of injury due to machine tipping**
If machine is freestanding and not secured, it could fall over and cause crushing.
- If machine is freestanding, it must be secured long term to prevent tipping.
- Wear protective gloves and safety shoes.

#### Beware

**Improper fresh water connection**
Backsiphonage of non drinking water into the water supply system
- Have the fresh water connected by a qualified professional and in accordance with local regulations.

#### Caution

**Material damage due to ingress of pressurised media**
- Shut off the fresh water supply at the main valve prior to installation works.
- Check that all lines are securely connected.

#### Caution

**Material damage due to steam escape**
Small quantities of steam may escape through the Multiwasher’s door area. It is possible that adjacent furniture can swell up.
- Protect adjacent furniture from swelling up.
- If possible, avoid installing the machine in an area close to sensitive furniture.

#### Note

Assembly may be performed only by a licensed and authorised service technician!

Assembly must be carried out in accordance with the installation drawing.
- Ensure the machine is level in both directions by using a water level.
- Compensate for an uneven floor by adjusting the foot studs (1).
- Table joints must be sealed with detergent-resistant sealing compound (e.g. silicone).
- Check that the machine is stable.

*For disposal of packaging materials, see chapter “Dismantling and disposal” on page 56!*
7 Commissioning

⚠️ Warning

Danger of injury due to entry into a danger zone

Unauthorised persons might be in or enter the danger zone during transport, assembly, commissioning, maintenance and repair work. This can lead to injuries.

• Only qualified persons should perform work at and with the machine.
• Remove unauthorised persons from the danger zone.
• Block off danger area and mark it for third parties.
• Never remove or disable safety devices on the machine.

7.1 Check prerequisites for commissioning

Caution

Material damage due to steam escape

Small quantities of steam may escape through the Multiwasher's door area. It is possible that adjacent furniture can swell up.

• Protect adjacent furniture from swelling up.
• If possible, avoid installing the machine in an area close to sensitive furniture.

Prerequisites to be provided by the customer:

• Consistently frost free storage and installation area.
• Anti-slip floor coverings installed in the work area around the Multiwasher
• Electrical connection in accordance with the dimensional drawing.
• Fresh water connection in accordance with the dimensional drawing.
• Waste water connection in accordance with the dimensional drawing.

7.2 Perform commissioning

Note

Instruction and initial commissioning may be performed only by an authorised service technician! The operator must not use the Multiwasher before completing training.

To avoid damage to the appliance or dangerous injuries during commissioning of the machine, please note the following points:

• Check supplier parts (e.g. external water processing devices or heating pumps). More detailed information can be found in the relevant operating instructions.
• Ensure that all tools and foreign parts are removed from the machine.
• Make sure that any escaped fluids have been removed.
• Before commissioning, activate all safety systems and door switches (on undercounter machines).
• Check all screw connections sit securely.
• For Multiwasher with GiO Module, attention must be paid to the "Commissioning certificate for GiO Modules" and the instructions adhered to accordingly.
8 Operation/use

8.1 Operating panel

The Multiwasher is equipped with a membrane key pad. A display reports the current temperatures of the wash and rinse water and displays information messages and error codes, if applicable. Control lights with the keys show readiness to operate, the active wash programme, the current wash cycle. The meaning of each of the keys and symbols is described below.

<table>
<thead>
<tr>
<th>Key/symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="" /></td>
<td>On/off key / programme termination</td>
</tr>
<tr>
<td><img src="image" alt="" /></td>

</tr>
<tr>
<td><img src="image" alt="" /></td>
<td>Current final rinse temperature</td>
</tr>
</tbody>
</table>
8.2 Choosing the right disinfectant, cleaning agent and rinse aid

MEIKO recommends brand cleaning products from leading manufacturers.

Cleaning and hygiene products from make an excellent choice.

Chemical product settings

The required detergent and rinse aid are dispensed from storage containers into the tank or boiler by electronically controlled dosing equipment. Dosing occurs automatically based on the requirements for the washing process.

The correct settings for the quantity of detergent and rinse aid depend on the product used. The relevant chemical supplier can install the correct setting.

Recommendations:
- The pH value of the detergent should be greater than 7.
- The pH value of the rinse aid should be between 7 and 2.

Change of products

Change of product means that one rinse aid or detergent/disinfectant is replaced by another. If these different products are mixed, it can lead to unwanted occurrences, such as precipitations.

- Before using new products, thoroughly rinse the hoses and dosing units with warm water.
- In addition, observe the instructions of the manufacturer of the chemistry and/or respiratory protection technology. This applies in particular when switching from manual to mechanical processing.
8.2.1 Prepare Multiwasher

⚠️ Warning

Danger of injury from contact with chemicals
Detergent and rinse aid result in damage to health if in contact with skin or eyes or if swallowed.
- Use eye protection.
- Wear protective gloves.
- Contact a physician immediately if chemicals or water containing chemicals (rinse water) are swallowed.

System operators must be very familiar with the Operating Instructions of the Multiwasher. Incorrect operation may result in personal injury or material damage.

1. Ensure the water supply is available.

2. Switch on the local mains switch.

3. Check detergent and rinse aid and top up, if required, see chapter “Fill consumables” on page 38.

4. Ensure that the hoses are fed down to the base of the container.

Note
If there is air in the hoses, the automatic dosing will not function correctly. The relevant pipe must be ventilated, see chapter “Ventilating the pipes” on page 47.

5. Open door.

6. Insert filter, tank cover sieve and wash systems.

7. Close door.
8.3 Start up the machine

The Multiwasher is closed and does not have a rack inside.

1. Press on/off key.

The Multiwasher is filling and heating up. During this time, the control light flashes over the selected wash programme key. The time required for the machine to be ready to operate depends on the temperature of the water supply and the installed boiler or tank heating capacity.

When the machine is ready to operate, the control light above the selected wash programme key is lit permanently.

8.4 Washing

8.4.1 Placing washware to be cleaned

- All hollow containers must always be loaded upside down. Otherwise the water will not be drained from the wash ware and brilliant drying will not be possible.

- Do not stack washware items on top of each other in the basket. Direct access to the wash water would be more difficult and the washing times would have to be unnecessarily long. Shorter washing with baskets which are not overfilled is more economical.

8.4.2 Select wash programme

1. Press the desired wash programme key.

The wash chamber door is locked during the program sequence.

The control light of the selected wash programme key is lit.

<table>
<thead>
<tr>

WW = Water change program

Note

The concentration of the rinse aid in the water remains constant: if the rinse time is changed, the dosage amount of the rinse aid changes correspondingly.
8.4.3 Start wash cycle

1. Clear the washware
2. Put the washware into the rack.
3. Open door.
4. Insert the rack into the Multiwasher.
5. Ensure that the correct programme has been selected, see chapter “Select wash programme” on page 31.
6. Close door.
7. Press the wash key.

The control light above the wash key is lit. The machine washes automatically and switches the programme off after completion.

The wash cycle time may differ from the set programme running time if the programme running time is not sufficient to heat up the boiler and tank water to the pre-set temperature. In this case, the cycle time is automatically extended. This means that the dishwasher runs until the required temperatures are reached, but max. 5 minutes.

The cleaning program starts and runs fully automatically until the end of the program.

The wash chamber door is locked during the program sequence.
**Beware**

Danger of burns and scalding due to hot rinse water, washware and machine parts

Contact with hot rinse water, washware and machine parts can result in burns/scalding of the skin.

- Wear protective gloves if necessary.
- Let the washware cool down before emptying, if necessary.
- Let the machine cool down before touching machine parts, if necessary.
- Never open the machine door or hood during a wash cycle.
- Only open and close the hood/door using the designated handle(s).

After the programme ends, the control light above the wash key turns off and an acoustic signal sounds.

1. Open door.

2. Carefully remove the rack.

3. Close door.

### 8.5 Shutting down the Multiwasher

The Multiwasher is closed and does not have a rack inside.

Press the **Off button**. All control lights turn off.

The self-cleaning program with subsequent forced draining is started.

The control light on the wash key is flashing. The rinse water is pumped out and the wash chamber is sprayed with hot fresh water. After the programme ends, the control light turns off.

After the end of the process, clean the machine, see chapter “Daily cleaning” on page 53.
8.6 Fill consumables

⚠️ Warning

Danger of injury from contact with chemicals
Detergent and rinse aid result in damage to health if in contact with skin or eyes or if swallowed.
- Use eye protection.
- Wear protective gloves.
- Contact a physician immediately if chemicals or water containing chemicals (rinse water) are swallowed.

8.6.1 Refill of internal storage container

The machine indicates the shortage of detergent and/or rinse aid on the display. The internal storage containers must be topped up. The storage tanks are located on the inside of the lower front panel.

1. Open front panel by lifting slightly on the handle (1).

Dosing recommendation
2. Pour the appropriate chemical for dosing into a measuring cup.

<table>
<thead>
<tr>
<th>Maximum filling quantity</th>
<th>TopClean 60 M2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Detergent</td>
<td>1000 ml</td>
</tr>
<tr>
<td>Rinse aid</td>
<td>150 ml</td>
</tr>
</tbody>
</table>

3. Use the loading chute to pour the chemical carefully into the machine until the storage container is full. Check fill level from outside.
   - Blue: rinse aid
   - Transparent: detergent
4. Rinse the loading chute and measuring cup.
5. Close lower front panel.
8.6.1 Replacing the external storage container

<table>
<thead>
<tr>
<th>Info</th>
<th>420</th>
<th>Info</th>
<th>520</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rinse aid low</td>
<td>Detergent low</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note**
The storage containers for detergent and rinse aid are located in close proximity to the Multiwasher.

**Note**
When using a suction lance which detects whether a storage container is empty, a shortage of detergent/disinfectant or rinse aid will be indicated on the display.

A storage container is empty.
1. Remove the suction lance from the empty container and insert it into a full container.
2. If necessary, ventilate the pipelines, see chapter "Ventilating the pipes" on page 47.
8.7 Water change programme (option)

A water change programme can be assigned to the wash programme keys. In the standard setting, the water change programme is stored at the wash programme key III (if present).

The Multiwasher washes normally and empties the tank. The fresh water final rinse follows. The water from the fresh water final rinse is already used for refilling the wash tank. The control light above the wash key goes out.

The following options now exist:

- Open door, remove rack, close door.

- Press wash program key I or II, if the following program is to be without a complete water change.

  Machine is made ready for operation.

- Open door, remove rack, close door and press wash key.

  Machine is made ready for operation and the wash programme is started.

- Press the off key.

  The self-cleaning programme with subsequent emptying of tank and boiler is started in order to take the Multiwasher subsequently out of operation.
8.8 Malfunctions

Despite careful construction, minor malfunctions may occur, which are usually easy to fix. Possible errors and troubleshooting measures for the operator are described in the following.

If the described operational problems occur repeatedly, the cause must be identified.

Common malfunctions

As a rule, faults that are not described here require assistance from an authorised service technician. Please contact your subsidiary or authorised dealer.
8.8.1 Messages

When a malfunction occurs, an information or error message (INFO/ERR) is displayed.

• Information messages (INFO) can be acknowledged with the wash key. If the cause has been remedied (see table), operation can be continued.
• Error messages (ERR) usually require the deployment of an authorised service technician!

<tr>
<td>Wash programme key 2</td>
<td>Decrease value by one</td>
</tr>
</tbody>
</table>

1. Press and hold the on/off key for approximately three seconds.

![Code 1---- CodE -O---]

2. Enter the service code for the required authorisation level.

![1-1 ----- Info 122]

After entry of the correct code, the desired authorisation level (1, 4) is displayed in the left field on the first digital position. If the entry is false, the message Info 122 appears.

**Authorisation level 1 – service level**
Read service data *(service code: 10000)*
The operator can view the service data.
Read / modify service data *(service code 10001)*
The operator can carry out all functions required for normal operation and configure the settings.

**Authorisation level 4 – dosing equipment level**
Read settings *(service code: 40000)*
The operator can view the data for the dosing equipment.
Read / modify settings *(service code 40044)*
The operator can view/edit all the relevant parameters for the dosing equipment.
8.10 Service level

8.10.3 Ventilating the pipes

The detergent/disinfectant or rinse aid pipes must be bled if air is sucked in from the dosing equipment. This occurs if a storage tank is completely emptied during operation, or if one of the suction lances is not carried to the base of the container.

1. Switch to security authorisation level 1 Service level (10001), see chapter “Change authorisation level” on page 45.

2. Select the entry 1–2 for venting the detergent line, entry 1–3 for the rinse line.

3. Confirm the selection.

Venting of the respective line is running, and the remaining time in seconds is displayed. If necessary, repeat venting.

Venting can be cancelled with the on/off key.
8.11 Dosing system level

1. Switch to security authorisation level 4 dosing system level (40000 or 40044), see chapter “Change authorisation level” on page 45.

The parameters relevant for the dosing system are displayed and can be changed.

9 Maintenance and cleaning

⚠️ Warning

**Danger to life from electric shock**
Contact with live electrical parts can lead to serious injury or death.

- Work at or repairs to the electrical system must be conducted by a qualified electrician who complies with the electrotechnical rules.
- Disconnect the machine from the power supply before working on the electrical system. To do this, turn the local mains switch to **OFF** and ensure that it can’t be switched back on again.

⚠️ Warning

**Danger to life from electric shock if cover panels are open**
If the machine is operated without cover panels, electrified parts are freely accessible. Contact with these parts can lead to serious injury or death.

- Disconnect the machine from the power supply before opening the cover panels. To do this, turn the local mains switch to **OFF** and ensure that it cannot be switched back on again.
- Attach all cover panels before placing the machine back in operation.

⚠️ Warning

**Danger of injury due to entry into a danger zone**
Unauthorised persons might be in or enter the danger zone during transport, assembly, commissioning, maintenance and repair work. This can lead to injuries.

- Only qualified persons should perform work at and with the machine.
- Remove unauthorised persons from the danger zone.
- Block off danger area and mark it for third parties.
- Never remove or disable safety devices on the machine.

⚠️ Beware

**Danger of burns and scalding due to hot rinse water, washware and machine parts**
Contact with hot rinse water, washware and machine parts can result in burns/scalding of the skin.

- Wear protective gloves if necessary.
- Let the washware cool down before emptying, if necessary.
- Let the machine cool down before touching machine parts, if necessary.
- Never open the machine door or hood during a wash cycle.
- Only open and close the hood/door using the designated handle(s).
Beware

Danger of crushing
Body parts can be crushed when the door is closed.
• Close the door using the blue handle.

Caution

Environmental damage due to improper disposal of liquids
Environmentally hazardous liquids (e.g. grease and oils, hydraulic oils, coolants, cleaning agents containing solvents etc.) may be used during work on and with the machine. Improper disposal of these liquids can damage the environment.
• Always capture, store and transport liquids in suitable containers.
• Never mix liquids.
• Dispose of liquids properly in accordance with local requirements.

9.1 Maintenance

Note
Maintenance work must only be carried out by an authorised in-house technician or an authorised service technician.
Cleaning work and changing pre-filter in Multiwasher with GiO Module must be carried out by trained operators.

The Multiwasher has been designed to keep the need for cleaning, care and maintenance to a minimum.
However, for reliable, safe and long-term function of the machine, and in the interest of hygiene and cleanliness, correct care and maintenance are necessary.
We recommend concluding a maintenance contract with our subsidiary in order to ensure a long service life of the Multiwasher.

A functional test on all safety systems of the machine is carried out during every regular maintenance.
• Comply with the maintenance intervals prescribed in these operating instructions.
• Please note the maintenance instructions for the individual components in these operating instructions.
• Carefully dispose of any cleaning products that could harm the environment.
# 9.2 Maintenance table

**Note**

Maintenance work must **only** be carried out by MEIKO authorised staff!

9.3 Daily cleaning

**Caution**

**Material damage due to water ingress**

Electrical cables and electronic components can be damaged if they come into contact with water.

- The Multiwasher, switch cabinets and other electrical components must **never** be sprayed with a hose or high pressure cleaner.
- Make sure that no water can enter the machine unintentionally.
- If installed at ground level, **never** flood the surrounding room.

**Note**

Do not use a foaming detergent for dish-washing by hand for pre-cleaning or cleaning the Multiwasher. Foam causes malfunctions and results in poor wash results.

The machine is emptied, see chapter “Shutting down the Multiwasher” on page 37.

1. Open door.

2. Remove tank cover sieve, filter, wash systems top and bottom. All parts to be cleaned are blue or have a blue handle.

3. Remove all food residues sticking to the tank, the tank heater and the filters using a brush.

4. Remove the wash and rinse arms and rinse thoroughly under running water. When doing this, pay particular attention to the nozzles!

5. Clean filter under running water.

6. Reinstall all parts in reverse sequence.
9.4 Cleaning the stainless steel surfaces

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Material damage due to incorrect cleaning</strong></td>
</tr>
<tr>
<td>Cleaning of parts made of stainless steel with unsuitable cleaning agents, care products and cleaning utensils leads to damage, deposits or discolourations on the machine.</td>
</tr>
<tr>
<td>• Never use aggressive cleaning or scouring agents.</td>
</tr>
<tr>
<td>• Never use cleaning agents that contain hydrochloric acid or bleaches based on chlorine.</td>
</tr>
<tr>
<td>• Do not use cleaning utensils previously used to clean non-stainless steel.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Material damage due to aggressive cleaning products</strong></td>
</tr>
<tr>
<td>The use of aggressive cleaning and care products near the machine can cause damage to the machine due to their fumes.</td>
</tr>
<tr>
<td>• Make sure that the cleaning and care products cannot have direct contact with the machine.</td>
</tr>
<tr>
<td>• Do not use aggressive cleaning agents (e.g. aggressive tile cleaner) to clean the surrounding area.</td>
</tr>
<tr>
<td>• Please observe the notes on the product packaging.</td>
</tr>
<tr>
<td>• In case of uncertainty, request information from the suppliers of these products.</td>
</tr>
</tbody>
</table>

We recommend that, when required, the stainless steel surfaces are cleaned exclusively using cleaning and care products that are suitable for stainless steel.

• Lightly soiled parts can be cleaned with a soft and possibly damp cloth or sponge. For moistening we recommend only using demineralised water.

• In order to prevent limescale, we recommend wiping the surfaces thoroughly dry after cleaning.
9.5 De-scaling

⚠️ Warning

**Danger of injury from contact with acids**

Descaling agents can cause damage to health if they come into contact with skin or eyes or are swallowed.

- Use eye protection.
- Wear protective gloves.
- Contact a physician immediately if chemicals or water containing chemicals (rinse water) are swallowed.
- Please take note of the manufacturer's safety instructions.

⚠️ Caution

**Destruction of plastic parts and seals from residues of de-scaling agent**

Completely flush the de-scaling agent out of the Multiwasher.

Operating the machine using hard water can result in the build up of lime scale deposits in the boiler and the tank interior. If this occurs, it is necessary to de-scale the tank interior, boiler housing, tank heating, boiler heating and the washing and rinse systems.

Notes on conducting de-scaling:

- For de-scaling, only use products suitable for industrial machine. Observe the manufacturer's instructions!
- Completely flush the de-scaling agent out of the Multiwasher. To do so, perform 1–2 wash cycles with fresh water.
- Possibly assign Customer Service the task of de-scaling the boiler.

9.6 Spare parts

Please provide the following information on any query and/or when ordering spare parts:

| Type: ………………………………………………………… |
| SN: ………………………………………………………… |
| (This information can be found on the type plate, see chapter “Type label” on page 18.) |
10 Dismantling and disposal

In addition to valuable raw materials and recyclable materials, the packaging and the old device may also contain substances that are harmful to health and the environment and were required for the function and safety of the old device.

Please do not dispose of your old device in residual waste. Instead, contact your dealer or the collection points set up in your community for information regarding the disposal of your old device.

10.1 Disposal of packaging materials

All the packaging materials are recyclable. The following materials are used:

- Square timber frame
- Plastic sheeting (PE film)
- Cardboard packaging (edge protection)
- Packaging strap (steel strip)
- Packaging strap (plastic (PP))

Note

The square timber frame consists of untreated raw pine / spruce. In order to guard against pests, country-specific import regulations may also stipulate the use of treated wood.

10.2 Dismantling and disposal of the old device

⚠️ Warning

Risk of injury from contact with chemicals

Detergent and rinse aid result in damage to health if in contact with skin or eyes or if swallowed.

- Use eye protection.
- Wear protective gloves.
- Contact a physician immediately if chemicals or water containing chemicals (wash water) are swallowed.

- Where appropriate, rinse machine components, containers, dosing units and hoses with fresh water to remove chemical residues. Wear suitable clothes (gloves, safety glasses) for this.

The device is marked with this symbol. Please observe the local regulations for proper disposal of your old device. The components should be separated by material for recycling.
