

doyen®

Rinse aid and detergent for
MEIKO cleaning and disinfection appliances

MEIKO and etol

Coordinated and optimally effective

Best products through the interaction of technology and chemicals – for excellent cleaning and disinfection in clinics, retirements and care homes. For sparkly and hygienically perfect cleaning results in the field of care, it is important for technology and chemicals to be optimally coordinated.

For more than 60 years, MEIKO - manufacturer of cleaning and disinfection appliances - and the etol detergents have formed a clean duo: perfectly arranged, optimised in consumption and costs and therefore particularly efficient and economical. Always in focus: the diverse requirements in hospitals and a consistently high demand in terms of the quality of our products.

Due to increasing resistances, hygiene is becoming more and more important. Whether it involves disinfection of surfaces or cleaning and disinfection of bedpans: etol has extremely effective and reliable solutions.

Even if the water conditions are not ideal for operating a cleaning and disinfection appliance, the combination of detergent and rinse aid with water softener prevents calcification of the appliance and ensures hygienically perfect dishes

Available at MEIKO Deutschland GmbH

- Rinse aid with water softener
- Detergent
- Suction lance system

Advantages of Doyen detergents and rinse aids

- Compatibility with a wide range of materials
- 20 – 40 % lower costs
- Optimum cleaning and rinsing results
- Reduced formation of foam
- Excellent calcium binding capacity to get care utensils perfectly clean while keeping machines in great condition
- Protects the environment by minimising the amount of chemicals required

**100%
Clean and
hygienic**

Five strong products for modern hygiene in clinics,
retirement and care homes

Doyen®

for heavy
soiling**

etol® www.etol.de

The Doyen rinse aids (SK22E, SK22E mit Apfelduft and SK 33E) and the Doyen detergents (Doyen R100, Doyen RS120) are medical devices and accordingly have the CE marking. All Doyen products meet the requirements of Regulation (EU) 2017/745 on medical devices. Available in 5 l containers.

MEIKO suction lance system: 100 % safe

The innovative MEIKO suction lance system eliminates the risk of unsuitable products being used in cleaning and disinfection appliances.

The special coding system prevents the rinse aid and detergent from getting mixed up.

This innovative solution from MEIKO guarantees absolute safety for users and ensures that the detergent and rinse aid are incorporated into the programme run at exactly the right time.

The suction lance coding system only works with Doyen products by etol. To be effective, use with the newly developed canister design for Doyen products.

- 100 % safety thanks to a special coding system
- Especially for all Doyen products from etol
